PETERS PAULJI

Full-Stack Engineer | AI & Automation Engineer | Web3 Developer

Port Harcourt, Rivers State, Nigeria | pauljizy@gmail.com | github.com/soma-connects

PROFESSIONAL SUMMARY

Results-driven Full-Stack Developer and AI Engineer with hands-on experience designing and shipping production-grade AI-powered SaaS applications and scalable web systems. Proven expertise in Next.js, TypeScript, Python, and Gemini AI, with a track record of building end-to-end solutions — from automated video processing pipelines to blockchain automation tools on Solana. Adept at translating complex technical requirements into clean, maintainable architecture across the full stack. Experienced in AI agent development, LLM workflow orchestration, cloud deployment (Vercel, Modal, Netlify), and Supabase/PostgreSQL database engineering. B.Eng. Computer Engineering graduate with production deployments across AI SaaS, fintech, and Web3 verticals.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES2022+), Python, PHP, SQL (PostgreSQL, MySQL), PLpgSQL, HTML5, CSS3

AI & Machine Learning: AI Agent Development, LLM Orchestration, Gemini AI (Flash 1.5/2.0), Google Vertex AI, TensorFlow, AI Video Automation, Prompt Engineering, pgvector / Vector Embeddings

Frontend Frameworks: Next.js 15 (App Router), React, TailwindCSS, Bootstrap

Backend & APIs: Next.js Server Actions, REST API Design, Python Worker Services, Modal (serverless GPU workers), FFmpeg, yt-dlp

Databases & Cloud: Supabase, PostgreSQL, MySQL, Cloudflare R2, Vercel, Netlify, GitHub Actions (CI/CD)

Authentication & Infra: Clerk, Supabase Auth, JWT

Blockchain / Web3: Solana, Web3, Smart Contract Automation, On-chain Event Monitoring, Wallet Automation

Tools & Practices: Git, GitHub Actions, Jest, ESLint, TypeScript (strict mode), Figma-to-code (MCP workflow), Agile

PROFESSIONAL EXPERIENCE

Lead Developer (Founder) | *Ncliper — AI SaaS Platform* 2024 – Present

ncliper.vercel.app | GitHub: soma-connects/Ncliper | Stack: TypeScript 77%, Python 20%

- Architected and shipped an end-to-end AI SaaS platform that automates viral short-form video clip generation from long-form YouTube content, owning the full product lifecycle from system design through cloud deployment.
- Integrated Google Gemini AI (Flash 1.5 / 2.0) for virality scoring and content analysis; orchestrated high-concurrency, compute-intensive video processing pipelines using Modal serverless GPU workers.
- Built FFmpeg-based cutting, cropping, and auto-captioning pipeline with yt-dlp for video ingestion; engineered Python worker services deployed independently from the Next.js frontend.
- Designed and implemented AI-driven content aesthetics engine for distinct visual styles ('High-Value' and 'Stoic'), demonstrating advanced capability in cinematic AI storytelling and automated content production.
- Built on Next.js 15 (App Router), React, TailwindCSS, TypeScript, Supabase (PostgreSQL + pgvector for vector search), Clerk authentication, and Cloudflare R2 object storage.
- Delivered 61+ commits across a structured monorepo (src/, python/worker/, supabase/migrations/, tests/) with GitHub Actions CI/CD and Jest test suite.

Founder & Lead Developer | *AlphaScale — Trading Alpha Platform* 2024 – Present

GitHub: soma-connects/AlphaScale | Stack: TypeScript 91%, JavaScript 7%

- Built the first reputation-verified SMC/ICT trading clip platform powered by FairScale, transforming long-form trading educational videos into verified, high-value alpha clips for professional traders.
- Extended and adapted the Ncliper AI media pipeline (Gemini + FFmpeg + yt-dlp) to a new domain, demonstrating platform-level architecture thinking and code reusability.
- Full stack: Next.js 15 App Router, TypeScript, Supabase, Clerk, Google Gemini, TailwindCSS; test-driven with Jest.

Blockchain Developer | *N-Reclaim* 2024 – Present

- Developed a Solana-based automated rent-reclaim bot and management dashboard, demonstrating proficiency in smart contract interaction, on-chain automation, and Web3 tooling.
- Engineered backend logic for real-time blockchain event monitoring and automated transaction execution on the Solana network.

Frontend Developer | *SecureHub Admin Dashboard* 2024

secure-hub-admin-dashboard.vercel.app | GitHub: soma-connects/SecureHub-Admin-Dashboard | Stack: TypeScript 98%

- Designed and shipped a full-featured admin dashboard with laundry-service backend integration; TypeScript-first codebase (98%) deployed to both Vercel and Netlify with Figma-to-code MCP workflow.

Junior Web Developer | *Eduremaisolf* Mar 2022 – Oct 2023

- Designed and engineered full-stack web applications including a school management dashboard and a hotel e-commerce platform, delivering complete frontend and backend systems.
- Built robust, database-driven solutions using PHP, MySQL, Bootstrap, and HTML/CSS; managed the full client lifecycle from discovery and development through delivery.
- Collaborated directly with clients to translate diverse requirements into reliable, production-ready products, strengthening communication and project management skills.

KEY PROJECTS

Ncliper

AI-powered viral video clip generator. Transforms long-form YouTube content into short-form viral clips using Gemini AI for virality analysis and FFmpeg for video processing. Live at ncliper.vercel.app.

AlphaScale

Reputation-verified SMC/ICT trading alpha clip platform. Uses FairScale for trader credibility scoring; AI pipeline extracts and ranks high-value educational trading content.

N-Reclaim (Solana Bot)

Automated Solana rent-reclaim bot with management dashboard. Real-time on-chain event monitoring, automated transaction execution, and Web3 wallet automation.

SecureHub Admin Dashboard

Full-featured admin dashboard with backend integration, TypeScript-first (98% TS). Deployed live at secure-hub-admin-dashboard.vercel.app.

EJ Blog & Suggestion App

Content management blog platform and community suggestion web application built with Next.js and TypeScript. GitHub: soma-connects/EJ-Blog, soma-connects/suggestionapp.

EDUCATION

Bachelor of Engineering (B.Eng.), Computer Engineering

*Michael Okpara University of Agriculture, Umudike*2017 – 2022

Final Year Project: Developed a Gesture Video Control System using Arduino and dual Ultrasonic Sensors, enabling hands-free media playback control (play, pause, rewind) via hand distance and movement detection — demonstrating early expertise in human-computer interaction and embedded systems.

ADDITIONAL INFORMATION

GitHub: github.com/soma-connects | Repositories: Ncliper, AlphaScale, SecureHub-Admin-Dashboard, EJ-Blog, suggestionapp, N-Reclaim

Location: Port Harcourt, Rivers State, Nigeria (Open to remote opportunities globally)

Interests: AI Agent Systems & Autonomous Workflows, Generative Media & Video Automation, SaaS Product Architecture, Web3 & On-chain Automation
